The Future of Subsea Cutting

Delivering Unrivalled Speed, Precision, and Reliability with Every Cut

DECOM
ENGINEERING

The New Standard in Subsea Cutting

Redefining the Industry with Speed and Precision

Since 2011, Decom Engineering has redefined subsea cutting with unparalleled speed and precision. We are a globally recognised leader in providing safe, reliable, and innovative solutions across the renewable energy, oil and gas, and infrastructure sectors. We have completed projects around the world and earned an unmatched reputation for reliability and performance.

Delivering Value Through Innovation - at the core of our service is the patented C1 Chopsaw Range, the physical embodiment of our commitment to delivering exceptional client value—cutting up to three times faster and with up to five times more cuts per blade. Our focus is on maximising your operational efficiency and reducing costs.

This approach provides clear operational and financial benefits for every client we serve:

- Maximize Vessel Time & Cut Project Costs
- Ensure Reliability and Eliminate Downtime
- Cut Where Others Fail

Decom Engineering continuously challenges conventional thinking, developing technologies that redefine subsea operations. We also offer a full suite of services, including onshore cutting and comprehensive Inspect, Repair, and Maintenance (IRM) services.

“ Our latest product offerings, including the versatile C1 series Chopsaws and our advanced lifting beams, embody Decom Engineering’s commitment to precision, efficiency, and adaptability. We build tools that deliver safety and performance in the field, creating real value for our clients worldwide. ”

-Nick McNally, MD

Our R&D Journey

Focused on Speed and Efficiency

Engineered to Solve Your Toughest Challenges

Our commitment to Research and Development (R&D) is fundamental to our leadership in subsea technology. We are dedicated to designing and refining cutting-edge tools that address the real-world needs of the decommissioning, oil and gas, renewable energy, and infrastructure sectors.

Our R&D has produced the field-proven C1 Chopsaw, which has performed over 7,000 cuts across six continents with a 100% success record. We have successfully cut a wide range of challenging materials, including super-duplex, Inconel, and thick PE coatings.

We are also known as the market leader in the most challenging severance projects, including cutting flexible risers and mooring chains under tension. This relentless pursuit of innovation ensures we remain at the forefront of technology, delivering solutions that drive efficiency, safety, and success.

A Collaborative Approach Excellence in Every Step

Your Trusted Partner for Project Success

Our culture is built on trust, integrity, and mutual respect. We start every project by working closely with you to understand your unique challenges, ensuring a tailored solution that prioritises safety, precision, and efficiency.

Our expert personnel are a critical part of our offering. They are the most knowledgeable and professional in the industry, delivering unmatched results with our market-leading C1 Chopsaws.

We offer a full suite of services that goes beyond just equipment rental. From initial project planning to real-time technical support, we are your end-to-end partner. Our goal is to ensure your project is a resounding success, upholding our core value of Quality Excellence.

Global Reach, Local Impact

Strategic Placement for Rapid Service Anywhere

Decom Engineering's operations span the globe, with our Chopsaws deployed across six continents. We have strategically placed our equipment and resources in key locations worldwide to ensure we can mobilise quickly and efficiently for any project.

Our proven global track record and our reputation for reliability and performance is unmatched. No matter where your project is, we have the experience and the reach to be your trusted partner.

The C1 Chopsaw Range

The Speed of Innovation

C1-10

The C1-10 is a purpose-built subsea cutting tool, expertly designed to handle the demanding task of cutting pipe and mooring chains under tension.

C1-12

The C1-12 Chopsaw revolutionises subsea cutting with its pioneering design, engineered specifically for materials ranging from 2" to 12" in diameter.

C1-16UL

Rapidly changing subsea operations, this tool is designed for ROV deployment, cutting mooring chains in mere minutes.

C1-24

The C1-24 Chopsaw stands at the forefront of subsea cutting technology, designed to handle materials ranging from 2" to 24" in diameter with unparalleled precision.

C1-32

The first of its kind with neutral buoyancy, it eliminates the need for a crane, enhancing versatility and ease of deployment.

C1-46

The only product in the market capable of clean cutting bundles with ease.

Tracksaw

The Tracksaw is the latest innovation in precision cutting, designed as the first of its kind in compact cutting technology.

TRACS-16

The TRACS-16 (Twin Recovery & Cutting System) is an advanced subsea tool designed to cut and recover pipelines.

Every saw is crafted with precision and purpose, reflecting our ongoing commitment to pushing the boundaries of subsea technology. Our field-proven tools provide cut times up to three times faster than Diamond Wire Saws and can perform up to five times more cuts before blade changes are required.
